Stereo Pre Main Amplifier

MARANTZ DESIGN AND SERVICE

Using superior design and selected high grade components, MARANTZ Company has created the ultimate in stereo sound. Only original MARANTZ parts can insure that your MARANTZ product will continue to perform to the specifications for which it is famous.

Parts for your MARANTZ stereo are generally available within 72 hours throughout the nation via a toll-free line to our National Parts Depot in California. The sales professionals who take your call immediately refer to their own desk top computer terminal and can quickly determine the availability and price information you require. If, for some reason, your order should exceed our available stock, we usually can instantly provide an alternate replacement part or current delivery information. When the order is placed and confirmed, the computer simultaneously generates "hard copy" orders at the distribution center. As hard copies come directly from the computer to the national parts depot, your requested stock is assembled and prepared for shipment and placed on the first available carrier for delivery to you.

ORDERING PARTS

Phone orders will eliminate mail delays, and we encourage the use of this method. If you order by mail, use MARANTZ parts order forms which are available from our National Parts Depot located at the following address:

SUPERSCOPE NATIONAL PARTS DEPARTMENT
20525 Nordhoff Street
Chatsworth, California 91311
Phone: 1-800-423-5108
1-213-998-9333

The following information must be supplied to eliminate delays in processing your order:

1. Complete address.
2. Complete part numbers.
3. Complete description of parts.
4. Model number for which part is required (indicate MARANTZ).
5. Account number (for account customers only).

Direct consumers will be provided with the current retail price quotation on available parts in order to advise them of the cost of the parts and shipping.

OVERSEAS PARTS ORDERING

Parts may also be ordered from the following overseas addresses:

U.S.A.

MARANTZ COMPANY, INC.
National Service Dept.

All of the above locations are fully equipped to take care of your total service needs. Because various countries have differing configuration requirements, it is necessary that you contact the service facility in your particular country. In the event that there is no service location listed for your country, please contact the nearest facility for the necessary assistance.

MODEL PM 420 STEREOPHONIC AMPLIFIER

INTRODUCTION

This service manual was prepared for use by Authorized Warranty Stations and contains service information for the Marantz Model PM420 Stereo Console Amplifier. Servicing information and voltage data included in this manual are intended for use by knowledgeable and experienced personnel only. All instructions should be read carefully. No attempt should be made to proceed without a good understanding of circuitry operation. The parts list furnishes complete ordering information. Most replacement parts should be ordered from the Marantz Company. However, a simple description is included for parts which can be obtained locally.

1. SHOCK, FIRE HAZARD SERVICE TEST

CAUTION: After servicing this appliance and prior to returning to customer, either primary AC cord connector pins (with unit NOT connected to AC mains and its Power switch ON), and the face or front Panel of product and controls and chassis bottom.

Any resistance measurement less than 1 Megohms should cause unit to be repaired or corrected before AC power is applied and verified before return to user/customer.

Ref. UL Standard NO. 1270. Para. 66. 3. D (Mandatory Test after servicing Electrical Appliances, effective 7-1-83).

2. PRE-AMPLIFIER

The SELECTOR switch and the TAPE MONITOR switch are comprised of electronic switches. Signals from the TUNER and AUX terminals are taken to the SELECTOR SWITCH (QS01). Signals from the PHONO terminals pass through the

phono amplifier (Q401) where they are amplified by 36dB and at the same time undergo RIAA equalization, before going to the SELECTOR SWITCH (QS01).

After being selected by the SELECTOR SWITCH, the incoming signals are taken to the TAPE MONITOR SWITCH and TAPE OUT terminals.

Signals which enter from the TAPE IN terminals are taken to the TAPE MONITOR SWITCH.

Signals which are selected by the TAPE MONITOR SWITCH are taken to the BALANCE and the motor-driven VOLUME control potentiometer, and then enter the pre-amplifier (QE01). The pre-amplifier has a gain of 17.5dB and a high pass filter of 6dB/OCT switched in to the circuit by the SUBSONIC FILTER switch. The signals from the pre-amplifier enter TONE AMP (QE02) and the frequency response is controlled by the BASS, MID and TREBLE controls.

After passing through the pre-amplifier, the signals enter the main amplifier.

3. MAIN AMPLIFIER

The main amplifier contains a 6dB/OCT type high pass filter network which can be switched in and out of circuit by means of the SUBSONIC FILTER switch. Therefore, filtering effect of 12dB/OCT will be obtained in total including that of the pre-amplifier stage. The main amplifier has also a resistor network which can be switched in the amplifier input stage by means of the AUDIO MUTING switch and attenuates signals by 26dB.

4. TEST EQUIPMENT REQUIRED FOR SERVICING

Table 1 lists the test equipment required for servicing the Model PM420 Stereo Console Amplifier. The wattmeter, AC voltmeter, and variable autotransformer may be assembled as a test fixture as shown schematically in Figure 1. The load resistors and AC ammeter may be assembled into a second test fixture as shown in Figure 2.

5. PERFORMANCE VERIFICATION

TEST PROCEDURE

A. TEST EQUIPMENT

Refer to Table 1 for required test equipment.

B. PRELIMINARY PROCEDURES

1. Make the test setup shown in Figure 1 with the instrument controls set in the following positions:

Line Switch	OFF
Variable-line switch	Variable
Wattmeter Switch	ON
Variable Autotransformer	0V (fully CCW)
Load	8 ohms (0.5mfd-OFF)

Audio Generator	1kHz
Output	5V range
Gain	Minimum
AC Voltmeter	30V range

2. Make sure that connections between the resistive load and the system terminals of the Model PM420 have negligible resistance when compared with the resistance of the load itself. Appreciable resistance in wiring adds to the total load, resulting in inaccurate measurements of output power.
3. Connect amplifier output to load and connect AC cord to line power. Connect shorting plugs to the Phono input jacks of the Model PM420.

Table 1. Test Equipment Required for Servicing

Item	Manufacturer and Model No.	Use
Distortion Analyzer Audio Oscillator AC Voltmeter	Sound Technology Model 1700B	Distortion Measurements Sinewave and squarewave signal source voltage measurements (AC)
Oscilloscope	Tektronix Model T932 Philips Model 3232	Waveform analysis and trouble shooting and ASO alignment
Circuit Tester		Trouble shooting
DC Voltmeter	Fluke Model 8000 "Digital" Simpson Model 313, Triplet Model 801	Voltage measurements (DC)
AC Wattmeter	Simpson Model 1379	Monitors primary power to amplifier
AC Ammeter	Commercial Grade (1 ~ 10 A)	Monitors amplifier output under short circuit condition
Line Voltmeter	Simpson Model 1359	Monitors potential of primary power to amplifier
Variable Autotransformer	Seperior Electronic Co., Powerstet Model 116B-10A	Adjust level of primary power to amplifier
Shorting Plug	Use phono plug with 600 ohm across center pin and shell	Shorts amplifier input to eliminate noise Pickup
Output Load (8 ohms, $\pm 0.5\%$ 100W)	Commercial Grade	Provides 8-ohm load for amplifier output termination
Output Load (4 ohms, $\pm 0.5\%$ 100W)	Commercial Grade	Provides 4-ohm load for amplifier output termination
Output Load Capacitor (0.5 mfd)	Mylar	Provides capacitive load for instability checks
AC Power Control Box	Optional Item. Fabricate in accordance with Figure 1	Monitors and controls primary power for amplifier
Amplifier Output Load Box	Optional Item. Fabricate in accordance with Figure 2	Provides various amplifier loads and can monitor shorted output

Figure1. AC Power Control Box Simplified Schematic

FIGURE 2. Amplifier Output Load Box Simplified Schematic

C. TOTAL HUM AND NOISE TEST

1. With shorting plugs connected to the Phono input jacks and an 8 ohm resistive load connected across the speaker system output terminals, connect a distortion analyzer across the load.

NOTE:

If the distortion analyzer does not contain a built-in voltmeter, an AC Voltmeter may be substituted.

2. Set the distortion analyzer controls for voltage measurements and apply power to the amplifier. Set the volume control fully CCW. Set the SELECTOR switch to PHONO.
3. If the distortion analyzer indicates more than 2.0mV refer to the trouble analysis section of this manual. Check capacitors, C801, C802, C803 and C804 and transistors, Q801, Q802, Q803 and Q804.
4. Set the volume control fully CW. If the distortion analyzer indicates more than 20mV, refer to the trouble analysis section of this manual. Check capacitors, C801, C802, C803 and C804 and transistors, Q801, Q802, Q803 and Q804.

D. MAXIMUM POWER OUTPUT

1. Connect the audio oscillator to the AUX input. Set audio oscillator frequency to 1kHz. Set SELECTOR switch to AUX.
2. With the distortion analyzer connected across the output load (8-ohm), set the analyzer on the 30VAC scale.
3. Turn the analyzer on and increase the audio oscillator output to 150mV. The AC Voltmeter should read 16V AC or more.

E. HARMONIC DISTORTION TEST

1. Set the frequency of the audio oscillator and the distortion analyzer to 20kHz.
2. Set the controls of the analyzer for voltage measurement on the 30 volt scale.
3. Adjust the audio oscillator output level until the analyzer meter indicates 16VAC.
4. Switch the distortion analyzer to Set Level and adjust SENSITIVITY for full scale reading on 0 ~ 0.3% scale.
5. Measure the total harmonic distortion with the analyzer and verify it is less than 0.05%.

NOTE:

Any parasitic oscillation in the amplifier will be displayed on the oscilloscope when capacitance is switched into the load.

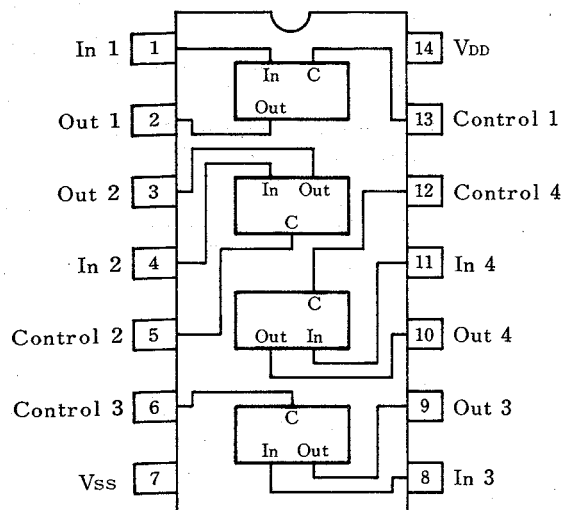

6. Switch the distortion analyzer back to SET LEVEL. (Do not readjust sensitivity of analyzer).
7. Change the frequency of the audio oscillator and distortion analyzer to 1kHz. Adjust audio oscillator output for a full scale reading on the 0 ~ 1% scale.
8. Measure the distortion, verifying it is no greater than 0.05%.
9. Repeat steps 7 and 8, changing frequency to 20Hz. Distortion should be no more than 0.05%.
10. Check for parasitic oscillation; there should be none.

Note on safety:

Symbol  Fire or electrical shock hazard. Only original parts should be used to replace any part marked with symbol . Any other component substitution (other than original type), may increase risk of fire or electrical shock hazard.

	Cin	*	*	1	0																							
	Cin	*	*	*	1																							
TMin	6	★ Tape monitor mode ON/OFF designation input terminal ★ Provides OFF with monitor mode ON or ON with monitor mode OFF by detecting rising edge of input signal.																										
TMCTL	22	★ Output terminal that controls external analog switch (LC4066B) for tape monitor. ★ N channel transistor source of complimentary buffer output is connected to V _{EE} .																										
T _M out	23	★ Terminal used for both output which controls external analog switch (LC4066B) for tape monitor and LED driver which indicates tape monitor state. ★ T _M out is a inverted polarity output of TMCTL.																										
MUTE _{in}	8	★ Input terminal that forcefully triggers audio muting control signal (MUTE) externally. ★ MUTE output becomes “H” when fixed to “L”.																										
MUTE	21	★ Audio muting control signal output terminal ★ When switching function or being applied with MUTE _{in} input provides pulse output, pulse width of which is determined by external components connected to CR terminal.																										
CR	1	★ Terminal for CR time constant that determines time period of audio muting control signal. ★ Time difference (mute delay) from rising of muting signal to switching timing of analog switch is determined by C·Rs time constant during TR turned on.																										
RESET	7	★ Input terminal that makes all analog switches off or tape monitor flip-flop reset. (“L” level active)																										

6. VOLTAGE CONVERSION

• EUROPEAN MODEL ONLY

To convert the unit to a different power source voltage, change the position as illustrated in the drawing below.

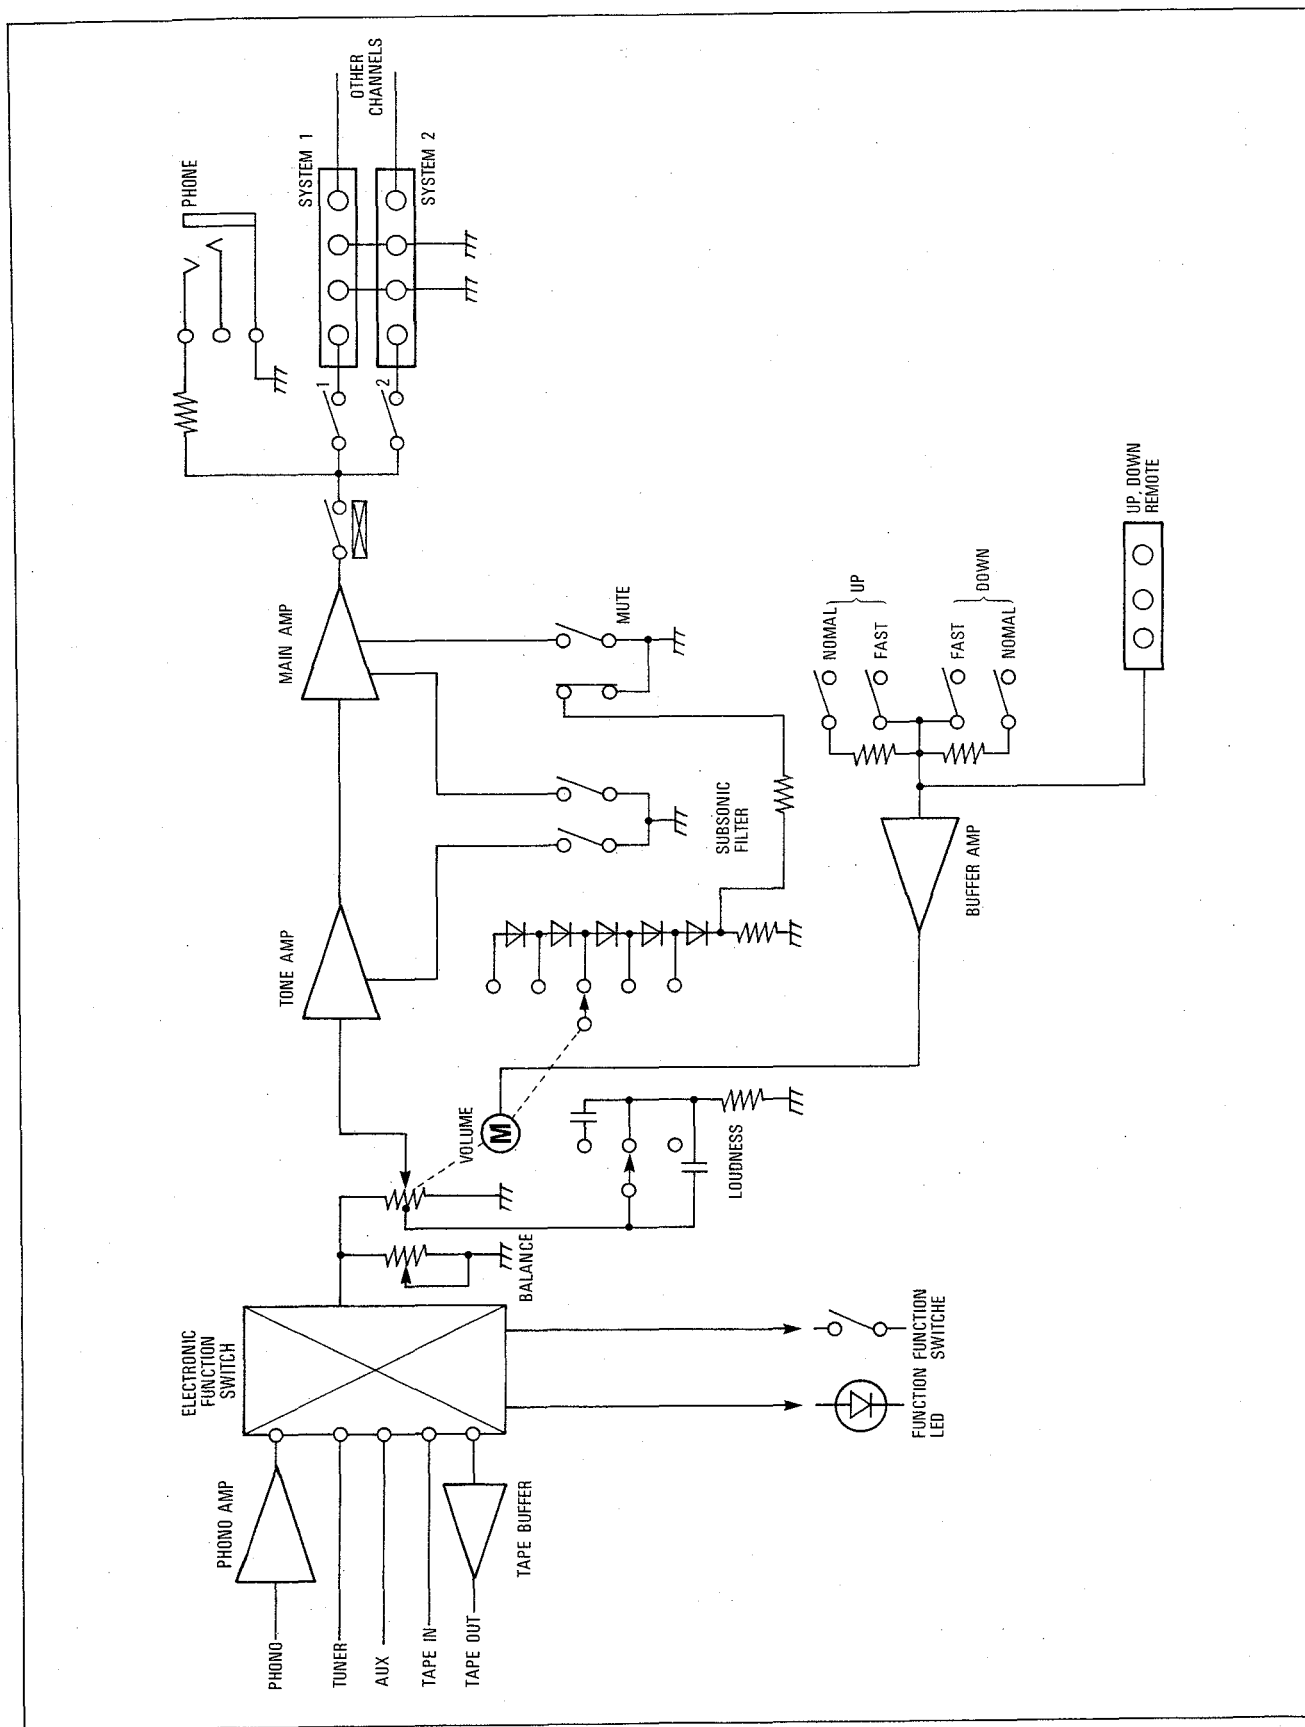

CAUTION

DISCONNECT POWER SUPPLY CORD FROM AC OUTLET BEFORE CONVERTING VOLTAGE.

(W01-99)	Assembly and Wiring
(T01-99)	Adjustment
(X01-00)	Correction

Note on safety:

Symbol Δ Fire or electrical shock hazard. Only original parts should be used to replace any part marked with symbol Δ . Any other component substitution (other than original type), may increase risk of fire or electrical shock hazard.

11. TECHNICAL SPECIFICATIONS

AUDIO SECTION

POWER OUTPUT PER CHANNEL

DIN 4 OHMS 1kHz	48W
RMS 4 OHMS 1kHz	44W
DIN 8 OHMS 1kHz	43W
RMS 8 OHMS 1kHz	40W
TOTAL HARMONIC DISTORTION AT RMS 8 OHMS	0.05%
I. M. DISTORTION	0.05%
DAMPING FACTOR 8 OHMS (1kHz)	40

MM CARTRIDGE INPUT

Frequency Response (RIAA)	±0.5dB
Signal-to-Noise Ratio	81 dB
Input Impedance	47 k ohms
Input Capacitance	100pF
Input Sensitivity	2.5mV
Equivalent Input Noise	1.0μV
Dynamic Range	100dB

AUX. INPUT

Input Impedance	27 k ohms
Input Sensitivity	150mV
Frequency Response	10Hz – 30kHz
Signal-to-Noise Ratio	90dB

OUTPUT VOLTAGE

Tape Out	380mV
----------------	-------

OUTPUT IMPEDANCE

Tape Out	325 ohms
----------------	----------

GENERAL

Power Requirement

N version	220/240V AC, 50/60Hz
T version	220/240V AC, 50/60Hz
E version	110/120/220/240V AC, 50/60Hz

Power Consumption at Rated Output, both Channels Driven	145W
---	------

Dimensions

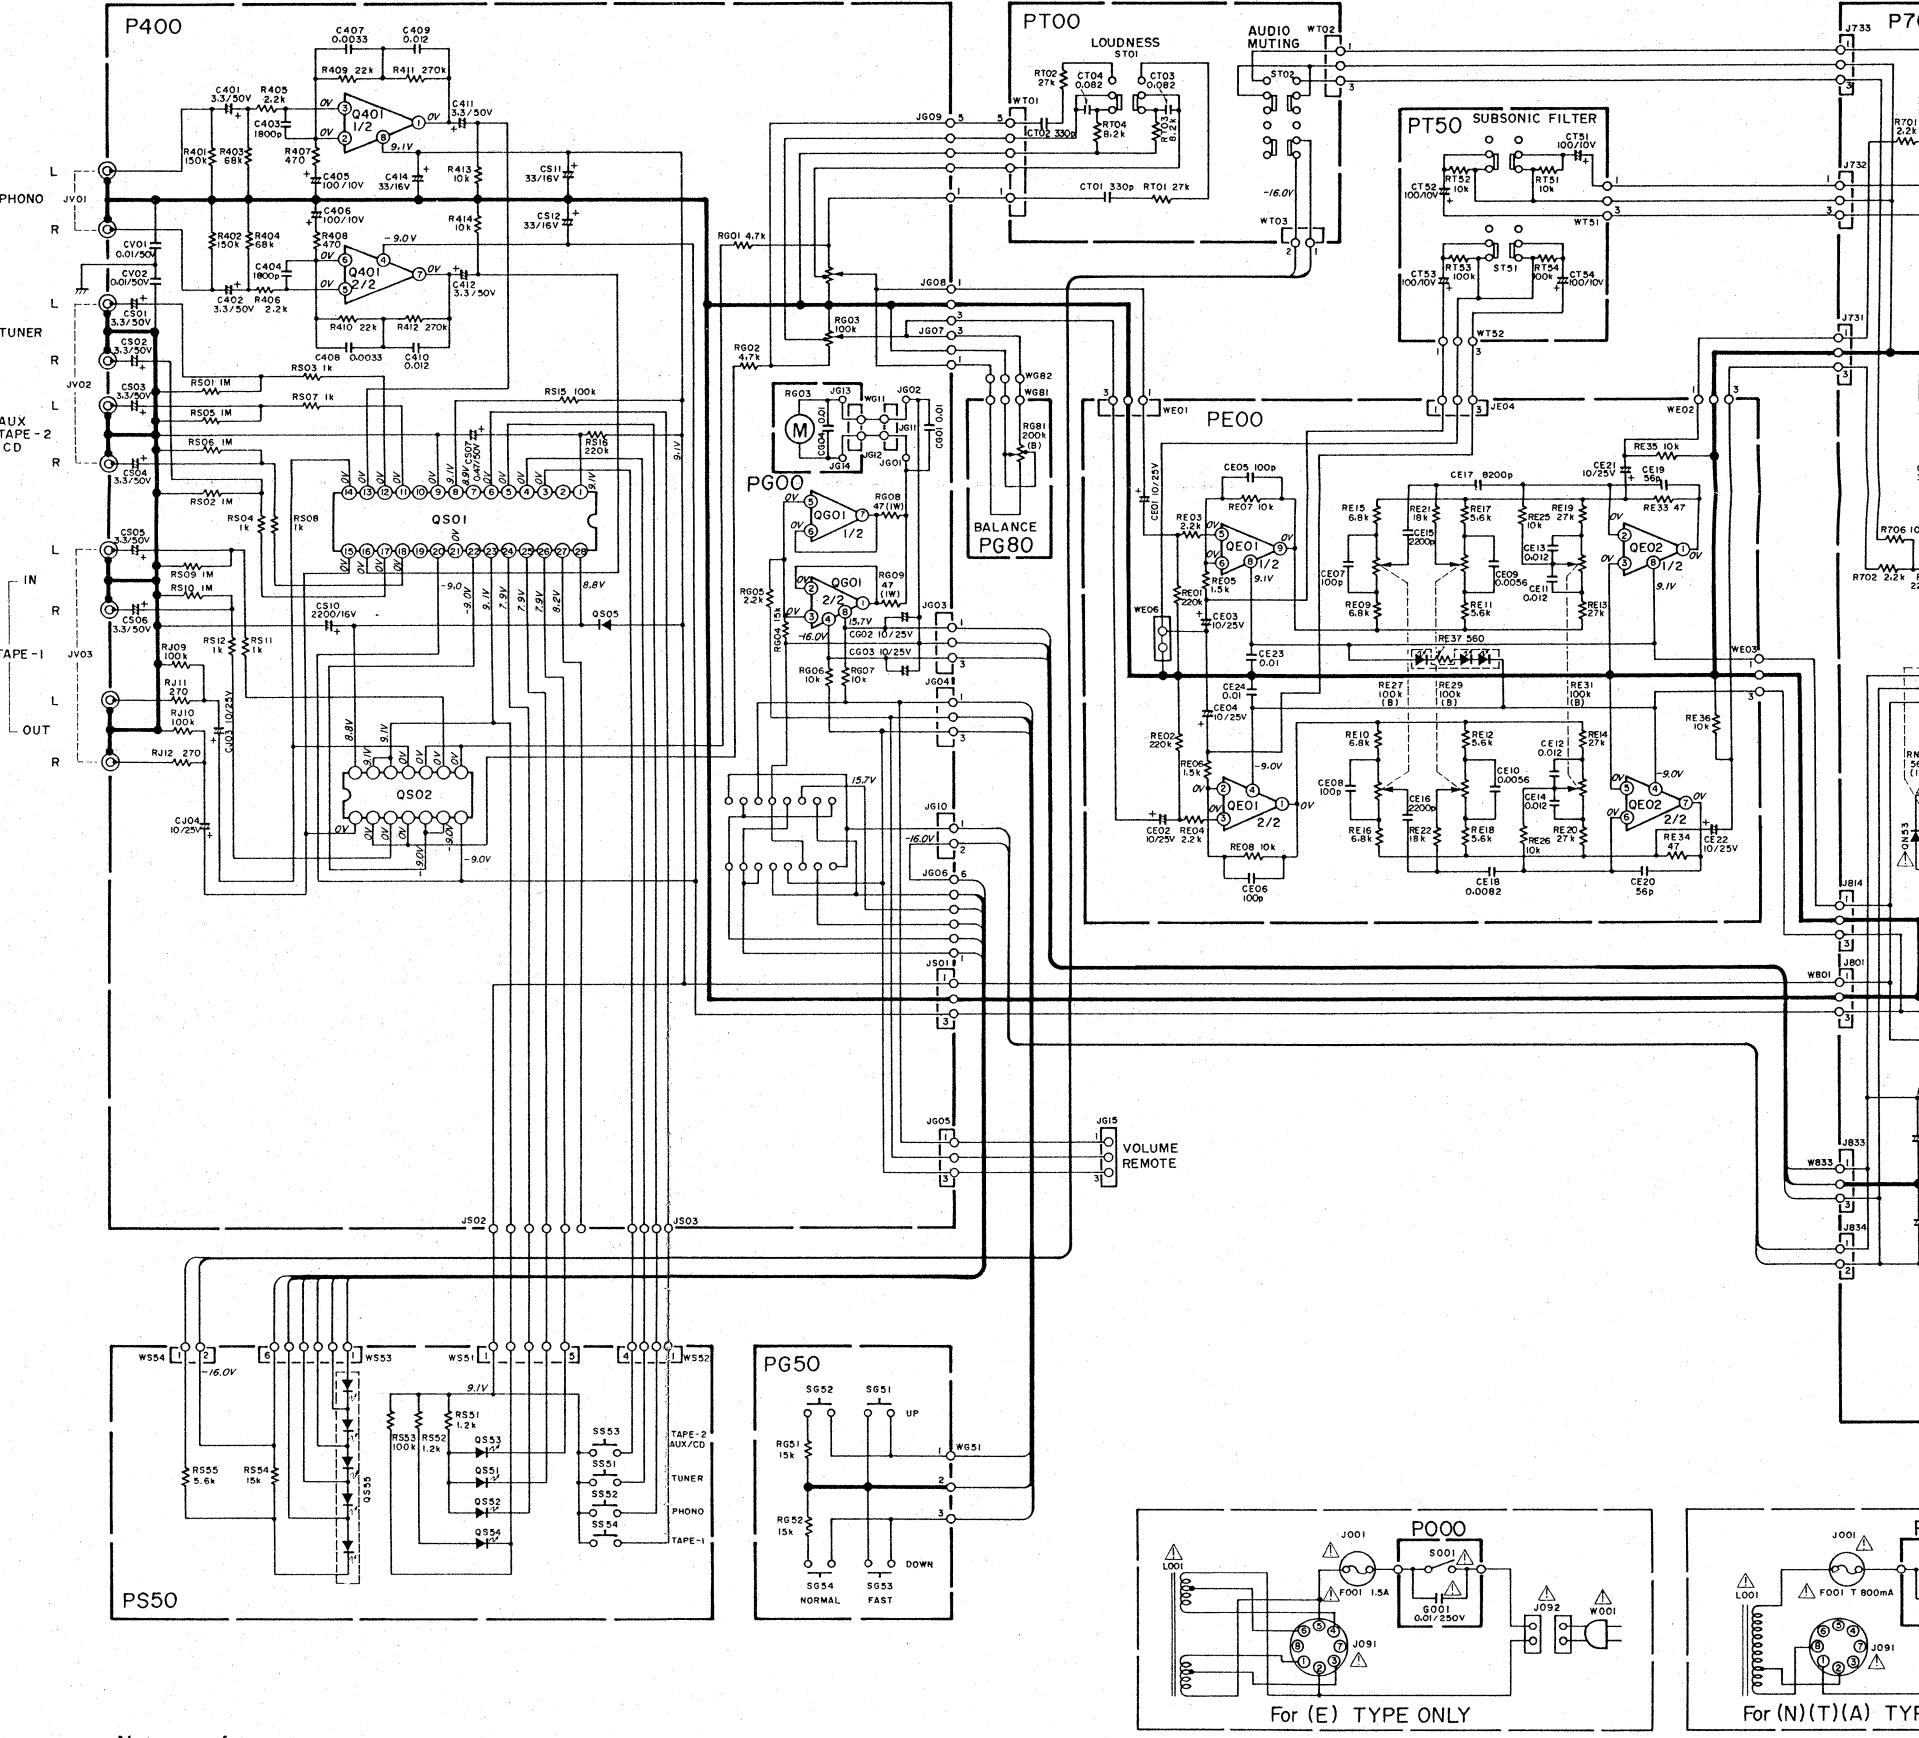

Panel Width	416mm
Panel Height	73mm
Depth	300mm

Weight

Unit Alone	5.8kg
------------------	-------
